

Daniel Jin

New York City, New York | Daniel.Jin@nyu.edu | (609)-213-8799 | [Personal Website](#) | [Linkedin](#) | [Github](#)

Summary

Full-stack software engineer with production experience in **distributed systems and data pipelines**. Built Temporal-based workflow infrastructure and financial data ingestion systems processing 6,000+ daily queries. Strong background in ML, algorithms, and systems design.

Education

New York University (GPA: 3.632/4.0) Sep 2023 – May 2025

Master's in **Computer Science** at Courant Institute of Mathematical Sciences

Coursework: Machine Learning, NLP, Distributed Systems, Operating Systems, Compiler, Algorithms

Rutgers, The State University of New Jersey (GPA: 3.727/4.0) Sep 2019 – May 2023

Double major in **Computer Science, Mathematics**, minor in **Linguistics**, Graduated with great distinction

Skills

Programming Languages: Java, Python, C, C++, OCaml, JavaScript, TypeScript, Go, ~~PHP~~, SQL, Coq, ~~Python~~

Tools: React, Node.js, gRPC, Prisma, Temporal, GCP, Kubernetes, MySQL, Grafana, PyTorch, Flask, JUnit, ROS

Specialized Skills: Machine Learning, NLP, Compiler Design, Formal Verification, Unit Testing, Distributed Systems

Experience

Full-Stack Software Engineer, Project Pluto ([Terminal X](#)) – New York City, NY May 2025 – Present

- Overhauled Temporal distributed workflow engine — upgraded library, fixed activity termination propagation, and implemented timeout hierarchy; reduced infrastructure costs by 75% through workflow optimizations
- Built automated data ingestion pipelines for 10+ financial sources (SEC, Green Street, thefly, Quartr) with real-time monitoring dashboards, supporting 6,000+ queries per day
- Led v2 frontend implementation — rebuilt the entire platform UI including landing page, answer page, source table, data room, and chat interface across the full stack (React, Node.js, gRPC, Prisma)
- Executed zero-downtime database migrations on production MySQL

Product Management Intern, Baidu – Beijing Jun 2024 – Aug 2024

- Worked cross-functionally with engineering and data teams at a \$32B AI company to ship an LLM-powered natural language SQL product for enterprise business intelligence
- Designed and monitored production integration with AppBuilder, Baidu's internal LLM platform, coordinating with engineers on API contracts and rollout
- Managed delivery of 5 customer-facing products, reducing time-to-delivery by 40% through cross-team coordination

Projects

Transit-Driven Retail — AI model predicting NYC retail vacancies using transit and crime data 2024

MiniOO ([github](#)) — OO interpreter with type checking in OCaml 2023

BMRs for Phonological Analysis ([github](#)) — presented at AMP 2022, UCLA 2021–2023

Teaching

Data Structure Course Assistant, New York University – New York City, NY Sep 2023 – May 2025

- Developed unit testing tools using JUnit in Java and shell, used to grade 800+ students' assignments per semester
- Independently led recitations and office hours for 60+ students per semester, with 100% positive feedback

Intro to CS Head TA, Rutgers University – New Brunswick, NJ Sep 2020 – Dec 2023

- Designed all recitation materials for a 1000+ student intro CS course in Java and led weekly sections
- Trained and managed 30+ section leaders per semester, fostering consistent and effective teaching among all sections

Achievements

- 2nd place, 2020 Princeton Micro-mouse Competition (East Coast) — Rutgers IEEE Robotics Team
- Built autonomous vehicle for IGVC; trained obstacle detection models in ROS — Rutgers IEEE
